Quality Auditor Interview Questions And Answers Guide.

Question - 1:

Why do you feel you are a good fit for our company as Quality Auditor?

Ans:

Having a job with adequate internal controls, giving reasonable assurance of eliminating risks for security, order, and offers an environment for success. With too many internal controls, work can be hindered and without proper internal controls in place there can be a lack of order and the ability to accomplish the mission of the company.

[View All Answers](#)

Question - 2:

Explain have you ever discovered fraud in an audit?

Ans:

We discover fraud in audit through effective planning. When planning for audit engagement auditor should consider possibility of fraud.

[View All Answers](#)

Question - 3:

Tell us what do you find most challenging when performing an internal audit?

Ans:

In an organisation, errors are about to happen intentionally or unintentionally. Intentional errors are frauds which is very tough to identify when people collude to make it very secretly since audit is persuasive and not conclusive.

[View All Answers](#)

Question - 4:

Explain what do you enjoy most about being an auditor?

Ans:

The fact that you engage people on different levels and that you get to be in a position to help in ensuring that an organisation thrives.

[View All Answers](#)

Question - 5:

Explain us what is destructive testing, and what are its benefits?

Ans:

Destructive testing includes methods where material is broken down to evaluate the mechanical properties, such as strength, toughness and hardness. For example, finding the quality of a weld is good enough to withstand extreme pressure and also to verify the properties of a material.

[View All Answers](#)

Question - 6:

Tell me what happens if your product, materials or supplies are nonconforming?

Ans:

This question reflects on the organization's ability to deal with product problems in a systematic way. Controlling nonconforming products is a basic discipline and one that smart auditors always probe. The answer to this question can be compared to the documented procedure and, more important, to the auditor's observations.

[View All Answers](#)

Question - 7:

Explain would you consider yourself to be a trustworthy person?

Ans:

I believe that, if I don't have any control and you can use company resources by your own purpose but as you are honest one and not doing such thing.

This is honesty and best quality.

[View All Answers](#)

Question - 8:

Please explain about your most significant career accomplishment?

Question - 10:

Explain what would you change about an auditors role, if you could?

Ans:

I would change the recommendations monitoring audit. I mean, we are thought that once the client have already accepted your recommendation, then they own the risks associated with that. As such, it would be better if instead of the auditor monitoring the implementation of the recommendations, it should be part of the client's performance assessment, accomplishments and scoreboard, the timely implementation of the recommendations.

[View All Answers](#)

Question - 11:

Explain about an inefficiency you detected during an audit?

Ans:

I have learnt that communicating effectively plays a very important role in audit. My articleship gave me a opportunity to work on it.

[View All Answers](#)

Question - 12:

Tell me how do you access product requirements?

Ans:

organization. In all cases, though, personnel must understand the product requirements. ISO 9001:2000 specifically requires that organizations identify product requirements in four ways:

- * As stated by the customer

- * Unstated by the customer but necessary for intended use

- * As statutory and legal regulations related to the product

- * As any additional requirements determined by the organization

- * The standard additionally requires that information describing the product be available (i.e., documented). Asking how personnel access product requirements is an important audit question because when requirements aren't accessible, big problems often result. Employees don't need to know product requirements by heart, but they should certainly be able to find the current versions of requirements and describe how they carry them out.

[View All Answers](#)

Question - 13:

Explain me benefits of Destructive Testing (DT)?

Ans:

- * Verifies properties of a material

- * Determines quality of welds

[View All Answers](#)

Question - 20:

Tell me what are verification and validation and difference between these two?

Ans:

Verification: process of evaluating steps which is followed up to development phase to determine whether they meet the specified requirements for that stage.

Validation: process of evaluating product during or at the end of the development process to determine whether product meets specified requirements.

Difference between Verification and Validation:

- * Verification is Static Testing where as Validations is Dynamic Testing.
- * Verification takes place before validation.
- * Verification evaluates plans, documents, requirements and specifications, where as Validation evaluates product.
- * Verification inputs are checklist, issues list, walkthroughs and inspection, where as in Validation testing of actual product.
- * Verification output is set of documents, plans, specifications and requirement documents where as in Validation actual product is output.

[View All Answers](#)

Question - 21:

Tell us the steps before an audit processes?

Ans:

Audit process can be long and tedious depending on how you go about them. There is need to know how to tackle this question, here is how;

- * Ensure the authority of the audit team is established- it will enhance the co-operation from the auditees
- * Have an internal audit entry conference meeting with the organization to be on the same page of what is to take place, include timelines and the necessary materials.
- * Decide which areas of the company will be audited and the frequency of the audits. Prepare as yearly audit schedule and distribute
- * Determine the purpose of the audit whether it complies with government regulations, quality standards, internal procedures and systems
- * Organize a meeting with the auditors to discuss plan, scope and purpose of the audit
- * Read the documents you are auditing against.

[View All Answers](#)

Question - 22:

Do you know how are problems prevented?

Ans:

Problem correction is relatively simple: Define the problem, identify the cause and take action to remove it. Problem prevention, on the other hand, is more complex. Many people would also argue that it's more important. Preventive action is specifically required by ISO 9001:2000, and it provides one of the most valuable links to continual improvement.

The most obvious way to generate preventive action is by analyzing data. Data analysis is a primary job of top management, but it can happen at other levels of the organization as well. When an organization openly shares data and encourages its analysis on a broad scale, then preventive action becomes easy. Employee creativity and innovation can also be a valuable starting point for preventive action. Savvy organizations look for ways to solicit improvement ideas from their employees and provide feedback on the viability of the ideas. Another source of preventive action is feedback from customers. Often, customers will provide ideas for improving the product in subtle yet significant ways.

Question - 23:

Do you know what is difference between QA, QC and Software Testing?

Ans:

Quality Assurance (QA): QA refers to the planned and systematic way of monitoring the quality of process which is followed to produce a quality product. QA tracks the outcomes and adjusts the process to meet the expectation.

Quality Control (QC): Concern with the quality of the product. QC finds the defects and suggests improvements. The process set by QA is implemented by QC. The QC is the responsibility of the tester.

Software Testing: is the process of ensuring that product which is developed by the developer meets the user requirement. The motive to perform testing is to find the bugs and make sure that they get fixed.

Ans:

The different types of software testing are unit testing, alpha testing, beta testing, shakeout testing, smoke testing, white and black box testing, integration testing, regression testing, load testing, stress testing, black box and white box testing, performance and user acceptance testing.

[View All Answers](#)

Question - 48:

Explain me when to start QA in a project?

Ans:

A good time to start the QA is from the beginning of the project startup. This will lead to plan the process which will make sure that product coming out meets the customer quality expectation. QA also plays a major role in the communication between teams. It gives time to step up the testing environment. The testing phase starts after the test plans are written, reviewed and approved.

[View All Answers](#)

Question - 49:

Tell us how do you contribute to achieving your organization's objectives?

Ans:

ISO 9001:2000 requires that organizations establish measurable objectives at relevant functions and levels. Perhaps an even more significant requirement is that personnel understand how they contribute to these objectives. This requirement doesn't apply only to some employees; it applies to everyone. All personnel must be able to communicate, in their own words, how they help move objectives in the right direction. It's conceivable that not all objectives apply to everyone in the company, and in those cases auditors would only expect that personnel understand the objectives that apply to them.

[View All Answers](#)

Question - 50:

Please explain what you should do after the internal audit?

Ans:

The internal audit process is very broad, there is that which has to be done once the audit is complete. Here is what should be done after internal audit;

- * Hold an exit conference, discuss the internal audit report on non-conformances and what part is missed
